

# Contents

<b>Preface</b>	<b>ix</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Computation . . . . .	3
1.2 The Limits of Computation . . . . .	5
1.3 Algorithms . . . . .	9
1.4 A Laboratory for Computational Experiments . . . . .	12
1.5 Summary . . . . .	14
<b>2 The Python Workbench</b>	<b>17</b>
<i>Introducing Python and an environment for interactive experiments</i>	
2.1 Interacting with Python . . . . .	18
2.2 Numbers, Functions, and the Math Module . . . . .	24
2.3 Variables . . . . .	27
2.4 Defining New Functions: def Statements . . . . .	31
2.5 Conditional Execution: if Statements . . . . .	36
2.6 Strings . . . . .	39
2.7 Objects . . . . .	45
2.8 Summary . . . . .	47
<b>3 The Sieve of Eratosthenes</b>	<b>55</b>
<i>An algorithm for finding prime numbers</i>	
3.1 The Algorithm . . . . .	56
3.2 Lists . . . . .	58
3.3 Iterating Over Lists: for Statements . . . . .	62
3.4 List Indexes . . . . .	65
3.5 The Animated Sieve . . . . .	69
3.6 A Helper Function . . . . .	74
3.7 The sieve Function . . . . .	76
3.8 ♦ Running a Program from the Command Line . . . . .	81
3.9 Summary . . . . .	84

<b>4 A Journey of a Thousand Miles</b>	<b>91</b>
<i>Iteration as a strategy for solving computational problems</i>	
4.1 The Linear Search Algorithm . . . . .	92
4.2 Implementing Linear Search . . . . .	96
4.3 The Insertion Sort Algorithm . . . . .	99
4.4 A Helper Function for Insertion Sort . . . . .	101
4.5 Implementing Insertion Sort . . . . .	105
4.6 Scalability . . . . .	107
4.7 Summary . . . . .	112
<b>5 Divide and Conquer</b>	<b>117</b>
<i>A new strategy: Breaking large problems into smaller subproblems</i>	
5.1 The Binary Search Algorithm . . . . .	120
5.2 Implementing Binary Search . . . . .	122
5.3 Binary Search Experiments . . . . .	126
5.4 The Merge Sort Algorithm . . . . .	129
5.5 Implementing Merge Sort . . . . .	131
5.6 Merge Sort Experiments . . . . .	136
5.7 ♦ Recursive Functions . . . . .	138
5.8 Summary . . . . .	141
<b>6 Spam, Spam, Spam, Mail, and Spam</b>	<b>147</b>
<i>A machine learning approach to filtering junk mail</i>	
6.1 A Closer Look at Strings . . . . .	148
6.2 Reading Text from a File . . . . .	154
6.3 Counting Words in a Text File . . . . .	159
6.4 Dictionaries . . . . .	161
6.5 Word Frequency . . . . .	166
6.6 Spamicity . . . . .	172
6.7 An Algorithm for Identifying Junk Mail . . . . .	176
6.8 Summary . . . . .	183
<b>7 Now for Something Completely Different</b>	<b>191</b>
<i>An algorithm for generating random numbers</i>	
7.1 Pseudorandom Numbers . . . . .	192
7.2 Numbers on Demand . . . . .	199
7.3 Modules and Encapsulation . . . . .	202
7.4 Games with Random Numbers . . . . .	208
7.5 Random Shuffles . . . . .	212
7.6 Tests of Randomness . . . . .	218
7.7 Defining New Objects: <code>class</code> Statements . . . . .	224
7.8 ♦ Additional Features for the Card Class . . . . .	234
7.8.1 ♦ Class Variables . . . . .	234
7.8.2 ♦ Exceptions . . . . .	236
7.8.3 ♦ Optional Arguments . . . . .	239
7.9 Summary . . . . .	242

---

<b>8 Bit by Bit</b>	<b>249</b>
<i>Binary codes and algorithms for text compression and error detection</i>	
8.1 Binary Codes . . . . .	251
8.2 Codes for Characters . . . . .	256
8.3 Error Detection . . . . .	262
8.4 Parity Bits and the Exclusive OR . . . . .	265
8.5 Huffman Trees . . . . .	269
8.6 Huffman Codes . . . . .	276
8.7 Summary . . . . .	282
<b>9 The War of the Words</b>	<b>289</b>
<i>Computer architecture and machine level programming</i>	
9.1 Hello, MARS . . . . .	292
9.2 The Temperature on MARS . . . . .	296
9.3 Corewar . . . . .	302
9.4 Self-Referential Code . . . . .	306
9.5 ♦ Clones . . . . .	309
9.6 Summary . . . . .	312
<b>10 I'd Like to Have an Argument, Please</b>	<b>315</b>
<i>A program that understands English (or does it?)</i>	
10.1 Overview of ELIZA . . . . .	317
10.2 Sentence Patterns . . . . .	321
10.3 Building Responses from Parts of Sentences . . . . .	325
10.4 Substitutions . . . . .	329
10.5 An Algorithm for Having a Conversation . . . . .	333
10.6 ♦ Writing Scripts for ELIZA . . . . .	338
10.7 ELIZA and the Turing Test . . . . .	339
10.8 Summary . . . . .	342
<b>11 The Music of the Spheres</b>	<b>349</b>
<i>Computer simulation and the N-body problem</i>	
11.1 Running Around in Circles . . . . .	353
11.2 The Force of Gravity . . . . .	358
11.3 Force Vectors . . . . .	365
11.4 N-Body Simulation of the Solar System . . . . .	369
11.5 Summary . . . . .	373
<b>12 The Traveling Salesman</b>	<b>379</b>
<i>A genetic algorithm for a computationally demanding problem</i>	
12.1 Maps and Tours . . . . .	382
12.2 Exhaustive Search . . . . .	385
12.3 Random Search . . . . .	390

12.4 Point Mutations . . . . .	393
12.5 The Genetic Algorithm . . . . .	396
12.6 Crossovers . . . . .	403
12.7 ♦ TSP Helper Functions . . . . .	406
12.8 Summary . . . . .	410
<b>Index</b>	<b>417</b>
