Software Artifacts

- VisIt (project architect 2000-2013, participant 2013-present)
 - VisIt is developed by over a dozen developers, is used at supercomputing centers around the world, has been downloaded more than *200,000* times, and was recognized with an R&D 100 award in 2005.
 - Childs designed and implemented the initial version of the library for VisIt’s parallelized large data handling. This library addressed key data model issues, data flow paradigms, parallelization models, and visualization and analysis algorithms. The library is now more than 350,000 lines of code and worked on by many developers.
